Department of Computer Science and Engineering (IOT)

YCCE

Vision

"To become the most preferred institution providing innovative, research and value based, professional education for the society at large".

Mission

YCCE is committed to
- Attract best talent and create learning ambience
- Practice Innovative teaching-learning & research
- Integrate Industry-Institute Collaborations
- Nurture students towards holistic development and choicest career

Department

Vision of the Department

To be a well-known center for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.

Mission of the Department

To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary arena by developing problem-solving skills through emerging technologies.

Practical No. 6

Aim: Simulate the page replacment algorithm first in first out (FIFO)
***Theory*:** A simulation of the **First-In, First-Out (FIFO)** page replacement algorithm involves tracking the sequence of page requests (the **reference string**) and how the pages are managed within a limited number of available **frames** in physical memory. FIFO replaces the page that has been in memory for the **longest time**, regardless of how frequently or recently it has been used. FIFO Page Replacement Simulation Initial Setup • Reference String: The sequence of pages requested by the CPU. $$7, 0, 1, 2, 0, 3, 0, 4, 2, 3, 0, 3, 2, 1, 2, 0, 1, 7, 0, 1$$ • **Available Frames:** The number of slots in physical memory. **Code: #include <iostream>** **#include <vector>** **#include <list>** **#include <algorithm>** **using namespace std;** **void fifo_page_replacement(const vector<int>& reference_string, int num_frames) {**
